

Table 4 Production and viability of *Alternaria solani* conidia on infected potato tubers kept in ambient store during the year 2010

Month	Fortnight	Number of conidia (cm <sup>2</sup> slice area)*	Viability per cent
March	I	52	29.0
	II	91	32.5
April	I	141	37.3
	II	225	42.5
May	I	313	45.6
	II	456	50.5
June	I	508	55.7
	II	436	51.3
July	I	370	40.2
	II	263	27.6

Note: Mean of three replications each comprising of 30 slice discs of 1 cm<sup>2</sup> surface area
